Reusable Stimulating Electrode
To use for nerve stimulating with felt pads, also stimulation-balls

Direction for use:
Soak the felt pads before use in physiological saline and put them on the special place in the electrode. Fix the electrode on patients cleaned skin with the band of this electrode. Connect the electrode with the EMG-Macchine and make sure that all Parameters stands on Zero.

Cleaning:
Clean the electrode and the lead wire with a damp cloth, using a mild detergent. Felt pads can be sterilized in Autoclave, will leave time for performance.

Disinfection: products normally used in hospitals for surfacedisinfection.

Storage: 10 to +50 degrees Humidity: 20 to 80%

Guarantee and Limitations:
Producer guarantees this product is realised in compliance with ISO13485 standard and complies with 93/42/EEC directive. Producer declines any responsibility resulting from faulty operation of this product when used differently from direction of use.

Waste disposal: Waste coming from hospitals must be disposed of in accordance with regulation in force.

Warning: This cable is to be used in EMG tests only.

ATTENTION:
Cable without touchproofed 2/3/4mm plugs are only allowed to be used in accordance with the German Medicin-Product-rules DIN 60601/1.3.1996, for old EEG/EMG Machines, to use it with their planned Headbox.
